

it.unitn.healthcore.controller.
DoctorController.viewPastAppointments

it.unitn.healthcore.controller.
PatientController.viewPastAppointments

it.unitn.healthcore.business.
AppointmentService.getPastAppointments

```
graph LR; A[it.unitn.healthcore.controller.  
DoctorController.viewPastAppointments] --> C[it.unitn.healthcore.business.  
AppointmentService.getPastAppointments]; B[it.unitn.healthcore.controller.  
PatientController.viewPastAppointments] --> C;
```

The diagram illustrates a dependency or call relationship. On the left, two separate boxes represent methods from different controllers: `DoctorController.viewPastAppointments` and `PatientController.viewPastAppointments`. Both of these methods have blue arrows pointing to a single box on the right, which represents the `AppointmentService.getPastAppointments` method. This indicates that both controllers rely on the same business service to retrieve past appointments.
